Searching for Words

► Understanding Searches

When you search for words, the encyclopedia searches first for matches of the words in the titles of articles. If no matches are found in titles, it automatically searches for matches in the articles themselves. If no exact matches are found in articles, the encyclopedia then searches for synonyms and related words.

Searches of more than one word find matches regardless of the order or proximity of the words. For example, if you search for *space travel*, you will find matches that have the words *travel* and *space* in the text of their articles.

► Expanding Your Searches

To find more matches, press **MORE** (the red key) up to three times after entering your word search. When you press **MORE** (red), your word search expands to include matches in articles or synonyms and related words, if they weren't already found.

► Understanding Filters

When you select more than one filter from a category, your selections are related by **or**. For example, if you select *Persons* and *Places* from the Article Type category, all the articles about persons **or** places will be found.

However, when you select filters from more than one category, your selections are related by **and**. For example, if you select *Persons* from the Article Type category and *1980's* from the Time Period category, only articles about persons **and** the 1980's will be found.

Using Categories with Searches

To fine-tune your searches, you can select filters after entering search words. Or you can select filters and then search for words. Try this example.

1. Select **Go To Word Search from the Locate menu.**

To learn how, read “Searching for Words.”

2. Type **war** and then press **ENTER**.

3. Use the arrow keys to highlight the **Locate** menu and select **Location**.

4. Press **ENTER** to select **Americas**.
